

PREMIA Audit Module

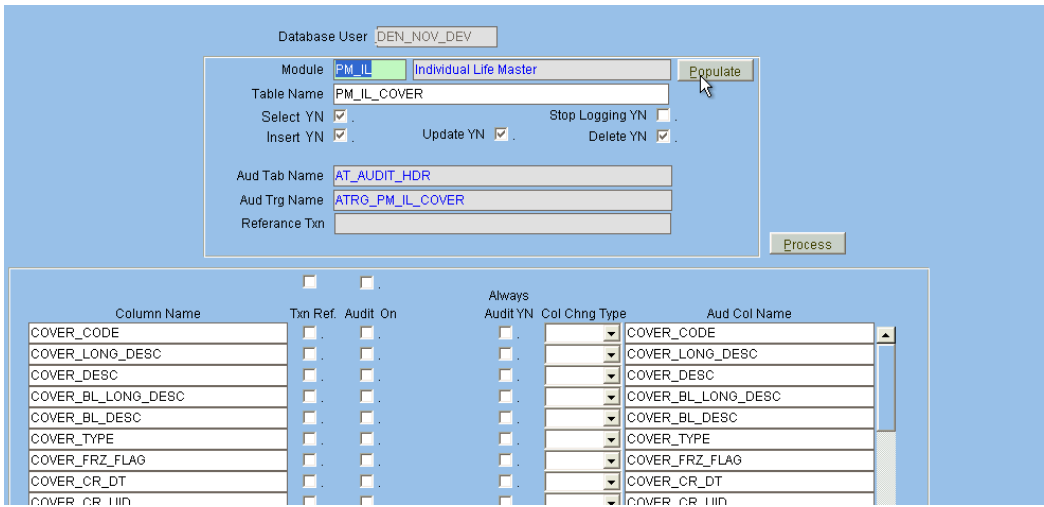

User Manual

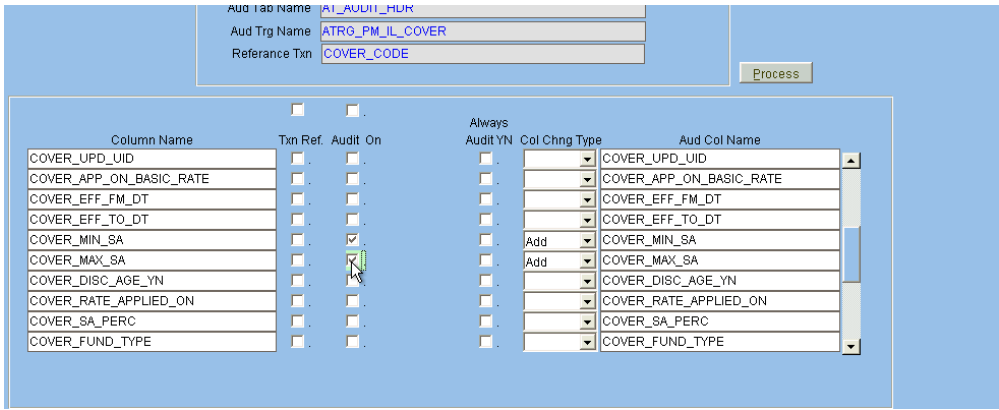

Audit Module:

Audit Module enables the user to configure selected values in the table to track for modification/deletion. Whenever transaction happens any changes done on these data points will be tracked and stored in the log table. These data can be exported to excel or analyses with the help of any data analyzing tool.

Introduction:

The audit trail can be enabled by configuring specific table for identifying the data points to be tracked, and the events that logs to be created. This data points can also link to any reference field data for meaning for analysis.

Step	Description
1.	Setup Setup the audit trail for a transaction.  Following are the steps to configure the audit for a data points. Select the modules from the list for value (eg. Masters,

	Under Writing, Re-Insurance, Claim, and Finance). • Select the table name from the LOB, from which data need to be audited. • Select the triggering events, On Select (creation), on Modification and On Deletion. The user can select multiple events based on the requirement. • On clicking Populate Button, system population all the column available on that table.
2.	• Select the transaction reference. The user can select one or two transaction reference, based on which will help the user to analyze the data. • Select the column to be audited. • The user can modify the column description with a meaningful name for easy understanding. • Click the Process button complete the configuration and enable to audit for the selected data points. • The user can stop the Audit by selecting the 'Stop Logging Y/N' checkbox. 

3.

Audit Log

- The logs created during the transaction can be viewed on the Audit log screen.
- The User can export the data in excel to analyzing.
